BLOCK DIAGRAM

CIRCUIT DESCRIPTIONS

The SBX-80 handles MIDI messages (Timing Clock, Start, Continue and Stop), DIN SYNC, TIME BASE and SMPTE as SYNC signals for use to control or to sync with timing-related equipment.

TIME BASE

The TIME BASE here refers to a clock(s) that represents the duration of a quarter note. When TIME BASE is selected either 1, 2, 3, 4, 12, 24, 48, 96 or 120 from front panel (SW101), the output from voltage divider is connected to AN0 of the CPU IC6 which converts the voltage to digital data through the internal A/D converter and subsequent circuitry then puts out a rectangular wave at PC6.

DIN SYNC

This signal is also called SYNC-24. As the name implies, the number of clocks per quarter note is always 24. The signal is transmitted even in the stop mode.

MIDI SYNC

This is Timing Clock message F8H. The number of F8H which determines the length of a quarter note is 24. Timing Clock is, as is the case of DIN SYNC, sent out from the SBX-80 even in the stop mode.

SMPTE TIME CODE

The SBX-80 is capable of using SMPTE as sync signal. The SMPTE TIME CODE consists of 80 bits/television frame -- 2 bytes for each SYNC, SEC, MIN, HOUR and FRM as shown below.

As the SMPTE code is originally devised for use with television system, its time base varies with television broadcasting system -- that is, a scanning frequency.

Transfer Speed

NTSC: 30 (frame) x 80 (bit) = 2400 baud
PAL/SECAM: 25 (frame) x 80 (bit) = 2000 baud

SMPTE code specifies a time at which a scanning starts to display a particular frame.

Each data of 2 bytes is encoded through Bi-phase modulation method with which bit "1" is indicated by having a level shift called an intermediate transition in the center of the bit period.

In the SBX-80 SMPTE code is decoded as shown below.

The time resolution of a sync signal would be 1/30 sec (in NTSC) if SMPTE code is used as it is. In the SBX-80 the bits in the SMPTE code are further utilized to expand the resolution. Each clock corresponding to a SMPTE bit is applied from pin 6 of IC22 to INT1 of the CPU IC6. An event occurred on any clock (bit) of the 80 clocks between two adjacent SYNC data is detected when SYNDT from pin 16 of IC11 is fed to PC3 of IC6 as a SMPTE EXT clock.

SWITCH SCANNING

START (TAP) and SUB TAP are read in the CPU IC6 every 2ms while the other switches are 8ms through 4 (PA0-PA3) x 9 (PB0-PB6, PA4-PA5) matrix.

AUDIO IN

An Audio signal (click) at the pin 6 of IC31 is sliced, amplified and applied to IC30 timer. IC30 develops a one-shot pulse of 200ms width regardless of the input pulse duration. If a pulse at pin 1 of IC31 is longer than 200ms, IC30 outputs two consecutive pulses.

ADJUSTMENT

CONNECTION, TEST POINTS, TRIMMERS

PULSE WIDTH

Connect the scope to TP1.
Adjust RT1 for either 416µs or 500µs according to the version.

パルスワイズ調整

オシロスコープをTP1に接続する。
SW102の設定(NTSCかPAL)に応じてパルスワイズが図の値になる様にRT1を調整する。

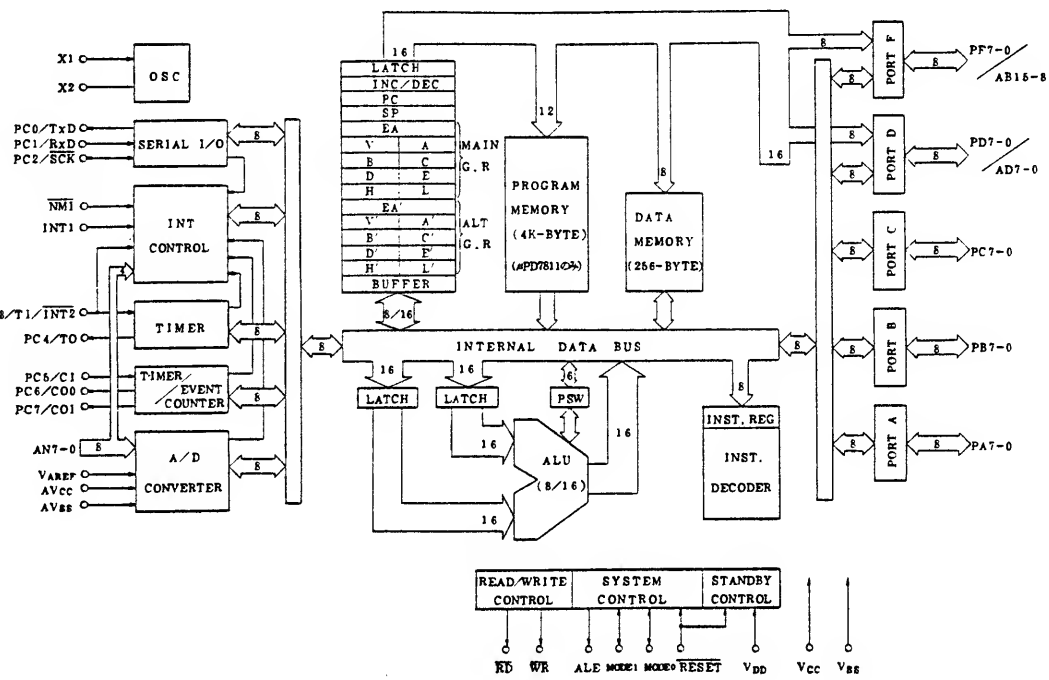

Press TAPE for lighting up SMPTE REC indicator.
Press START.
Connect scope to TP2. The waveforms will slightly jitter; this is normal.
Adjust RT2 for the pulse width as shown above in TP1.

オシロスコープをTP2に接続する。
本機をテープ・モードのSMPTE/RECに設定する。
スタート・ボタンを押す。
パルスワイズがRT1の場合と同じになる様に、RT2を調整する。
(この場合波形にはジッタが生じる)。

MIDI IMPLEMENTATION

1. TRANSMITTED DATA

1.1 While in MANUAL, PLAY, RECORD or EDIT mode

Status	Second	Third	Description	
1111 0010	0ppp pppp	0ppp pppp	Song Position Pointer	*1
1111 0011	0sss ssss		Song Select	*2
1111 1000			Timing Clock	*3
1111 1010			Start	
1111 1011			Continue	
1111 1100			Stop	

Notes:

- *1 While in PLAY mode, and when the SMPTE switch is set at EXT, this unit will work in the AUTO-SYNC mode, then when the recorded SMPTE code signal is received from the TAPE SYNC IN, a proper Song Position Pointer first, then a Continue are transmitted.
While in PLAY mode, when the measure of the song is set by the numeric keyboard, the Song Position Pointer is sent.
- *2 When a song number is chosen by the numeric keyboard on the front panel.
- *3 The Timing Clock is always transmitted even when receiving or transmitting the System Exclusive message.

1.2 While in TAPE mode

Only the System Exclusive Messages are transmitted for data communication as described in section 4.

2. RECOGNIZED RECEIVE DATA

2.1 While in MANUAL, PLAY, RECORD or EDIT mode

No messages are recognized for its internal function.

2.2 While in TAPE mode

No messages, except the System Exclusive, are recognized for its internal function.

3. TRANSFERRED RECEIVE DATA

3.1 While in MANUAL, PLAY, RECORD or EDIT mode

The following messages received from MIDI IN are directly transmitted to MIDI OUT.

Status	Second	Third	Description
100x nnnn	0kkk kkkk	0vvv vvvv	Note ON/OFF
1010 nnnn	0kkk kkkk	0vvv vvvv	Key after touch
1011 nnnn	0ccc cccc	0vvv vvvv	Control change, Mode message
110x nnnn	0vvv vvvv		Program change, Channel after touch
1110 nnnn	0vvv vvvv	0vvv vvvv	Pitch bender
1111 0000	0111 1111	0ddd dddd 1111 0111 System Exclusive message
1111 0110			Tune request
1111 0111			EOX
1111 1110			Active sensing
1111 1111			System reset

3.2 While in TAPE mode

Messages described in 3.1, except the System Exclusive messages, are transferred. However, while communicating with the other unit by using the SBX-80's System Exclusive messages, which is described in section 4, no other messages are passed from MIDI IN to MIDI OUT.

9

4. SBX-80 EXCLUSIVE MESSAGES

While in MANUAL, PLAY, RECORD or EDIT mode, All System Exclusive messages received from MIDI IN are directly transmitted to MIDI OUT.

While in TAPE mode, only the following messages are transmitted or recognized. All of other System Exclusive messages are ignored.

4.1 Message type

4.1.1 Want to send a file -- WSF recognized only

Byte	Description
1111 0000 F0H	Exclusive status
0100 0001 41H	Roland ID #
0101 0000 40H	Operation code = WSF
0111 1111 7FH	Unit number = no channel device
0110 0000 60H	Format type = SBX data
1111 0111 F7H	End of Exclusive

4.1.2 Request a file -- RQF recognized only

Byte	Description
1111 0000 F0H	Exclusive status
0100 0001 41H	Roland ID #
0101 0000 41H	Operation code = RQF
0111 1111 7FH	Unit # = no channel device
0110 0000 60H	Format type = SBX data
1111 0111 F7H	End of Exclusive

4.1.3 Data -- DAT

Byte	Description
1111 0000 F0H	Exclusive status
0100 0001 41H	Roland ID #
0101 0000 42H	Operation code = DAT
0111 1111 7FH	Unit # = no channel device
0110 0000 60H	Format type = SBX data
(00hh 0000)	(header 10H or 20H)
0000 dddd	Data (max 256 bytes)
0000 dddd	Check sum
0sss ssss	End of Exclusive
1111 0111 F7H	

4.1.4 Acknowledge -- ACK

Byte	Description
1111 0000 F0H	Exclusive status
0100 0001 41H	Roland ID #
0101 0000 43H	Operation code = ACK
0111 1111 7FH	Unit # = no channel device
0110 0000 60H	Format type = SBX data
1111 0111 F7H	End of Exclusive

4.1.5 End of file -- EOF

Byte	Description
1111 0000 F0H	Exclusive status
0100 0001 41H	Roland ID #
0101 0000 45H	Operation code = EOF
0111 1111 7FH	Unit # = no channel device
0110 0000 60H	Format type = SBX data
1111 0111 F7H	End of Exclusive

4.1.6 Communication error -- ERR recognized only

Byte	Description
1111 0000 F0H	Exclusive status
0100 0001 41H	Roland ID #
0101 0000 4EH	Operation code = ERR
0111 1111 7FH	Unit # = no channel device
0110 0000 60H	Format type = SBX data
1111 0111 F7H	End of Exclusive

4.1.7 Rejection -- RJC

Byte	Description
1111 0000 F0H	Exclusive status
0100 0001 41H	Roland ID #
0101 0000 4FH	Operation code = RJC
0111 1111 7FH	Unit # = no channel device
0110 0000 60H	Format type = SBX data
1111 0111 F7H	End of Exclusive

4.2 Sequence of communication

While in one of TAPE modes (SAVE, VERIFY, LOAD or SMPTE REC) and when these functions are not operating, only the WSF and RQF are recognized, then when the WSF or RQF message is received, the communication sequence will start.

This unit does not have functions to begin the communication by itself.

4.2.1 When the WSF is received.

WSF	received
ACK	transmitted
DAT	received
ACK	transmitted
:	
:	
EOF	received
ACK	transmitted

4.2.2 When the RQF is received.

RQF	received
DAT	transmitted
ACK	received
:	
:	
EOF	transmitted
ACK	received

4.2.3 When the ERR is received while communicating.

DAT	transmitted
ACK	received
RJC	transmitted

4.2.4 When the RJC is received while communicating.

RJC	received
The communicating function will stop.	

4.3 Data format in the DAT messages

Each byte of the data divided 2 nibbles, right justified, LS nibble (lower nibble) is sent first.

a. File header block (in the first DAT message)

Byte in DAT	Description
0001 0000 10H	Header
	SMPTE OFFSET
0000 hhhh	Lower nibble of Hour
0000 hhhh	Upper nibble of Hour
0000 mmmm	Lower nibble of Minute
0000 mmmm	Upper nibble of Minute
0000 ssss	Lower nibble of Second
0000 ssss	Upper nibble of Second
0000 ffff	Lower nibble of Frame
0000 0fff	Upper nibble of Frame
0000 bbbb	Lower nibble of Bit
0000 0bbb	Upper nibble of Bit
0000 000d	Beat division 0: 1/4, 1: 1/8
0000 000m	Metronome 0: no count 1: count

b. Measure control block (in the second DAT message)

Byte in DAT	Description
	Beat per measure (1 - 15)
0000 bbbb	Lower nibble
0000 0000	Upper nibble
	Number of measures - 1
	(0 - 997)
0000 mmmm	Lower nibble of lower byte
0000 mmmm	Upper nibble of lower byte
0000 00mm	Lower nibble of upper byte
0000 0000	Upper nibble of upper byte
...	
0000 0000	Sets of 6 bytes
0000 0000	Data end mark (6 bytes)
0000 0000	
0000 0000	
0000 0000	
0000 0000	

Notes:

If the 2 measure count-in exists, the lower nibble of the first 'beat per measure' is the number of the beat, then the upper nibble of the first 'beat per measure' is 0000 1000, and the next 4 bytes are 0000 0001, 0000 0000, 0000 0000, 0000 0000 respectively, which indicate number of the count-in measures being 2.

If the number of bytes exceeds 256, the third message will follow from the next nibble.

Total of the measures will not exceed over 998.

c. Data length block (in the third or fourth DAT message)

Byte in DAT	Description
0010 0000 20H	Header
	Length of data bytes (0 - 7934) *
0000 xxxx	Lower nibble of lower byte
0000 xxxx	Upper nibble of lower byte
0000 xxxx	Lower nibble of upper byte
0000 000x	Upper nibble of upper byte

Note :

* The length value equals doubled number of beats the song data consists of.

d. Tempo data block

Byte in DAT	Description
	Tempo values in SMPTE format for the first beat
0000 bbbb	Lower nibble of Bit value
0000 0bbb	Upper nibble of Bit value
0000 ffff	Lower nibble of Frame value
0000 0fff	Upper nibble of Frame value
...	
...	Sets of 4 bytes for each beat
...	
	Additional 4 byte data (same values of the end beat data)
0000 eeee	Lower nibble of Bit value
0000 0eee	Upper nibble of Bit value
0000 eeee	Lower nibble of Frame value
0000 0eee	Upper nibble of Frame value
